Chrysanthemum Cuttings

FOR THE 1947 SEASON

We are offering rooted and unrooted cuttings of over 300 chrysanthemum varieties in increasing volume from September, 1946, through each succeeding month. Orders must be placed at least a month in advance of the requested delivery date. Please indicate the earliest date delivery will be acceptable and the maximum number of cuttings that can be handled in a single shipment. In all cases where exact delivery date cannot be met, an estimate of expected delivery of each variety will be given on the acknowledgement of the order.

Quality Cuttings

Assure Quality Mums

More and more growers all over the country are learning the advantages of buying rooted or unrooted chrysanthemum cuttings from a good reliable source—instead of starting from scratch

to grow their own.

There are various reasons for this trend. Foremost among these is the fact that such cuttings are disease-free, sturdy, proven as to performance and quality, thereby eliminating the headaches and problems of breeding and propagation which plague the average grower. All that work and trouble has been handled for him by specialists, who devote all their time to "taking the bugs out" (literally and figuratively) from new and old varieties, experimenting and testing to determine what new varieties will do well commercially and what old varieties can be improved.

Of no small importance is the fact that the chrysanthemum market is growing wider every year and that, with the forthcoming year-round flowering program, its potentials are unlimited. To profit from this trend, most growers will want to produce as many top-grade flowers as possible—as fast as possible—and leave the tedious, complex, time-absorbing job of breeding and propagating to those who specialize in those functions.

Our growers are the most widely recognized leaders in this field. As distributors of their famous cuttings, we believe that the story of their operation

will be of great interest to you.

Big Increase for 1947

With demand ever on the increase and with the releasing of construction materials, our growers are expanding their bench area 40-50 percent, which will greatly increase the 1947 output of cuttings.

Their primary aim is to produce the best cutting on the market—from any

angle.

To that end they operate two separate and distinct establishments. One is a 4½-acre Research Plant, with complete experimental and testing facilities

Left. Rototilling the soil for planting. Right. Cloth houses, in which plants' response to shade is tested.

for breeding and developing new varieties and producing cultured stock. The other is a Production Plant, spread over 10½ acres, where only tested, proven varieties are grown on a gigantic commercial scale. All the greenhouses are 800 feet long . . . the three largest being 80 feet wide and the others varying from 14-20 feet in width.

Already producing over 300 varieties, our growers are continuously working to develop new and better varieties to add to their ever-expanding list. This year there are nine additions.

A tour through the grounds and buildings convinces the visitor that the entire operation is scientific, systematic and efficient.

The particular pride—and one of the most important features—of the Research and Development Plant is the year-round flowering program, which will soon make chrysanthemum cuttings available to growers throughout the entire 12-month period. There are twenty-four benches, each 150 feet long, all in gravel culture. Two hundred and thirty-six year-round flowering varieties are included—about 125 of these being commercial varieties and the rest developmental varieties.

The earliest bench was started May 13 this year and scheduled to bloom

the middle of September. Every three weeks another bench of the same varieties is planted. The plan is to rotate them so that from September 15 on they will bloom continuously and indefinitely.

In three cloth houses, experiments are conducted to test the plants' response to shade, which brings them in earlier. One of the best characteristics of the chrysanthemum is that you can do most anything with it, as far as growth is concerned, by regulating the length of the day. All three houses contain the same varieties, but each is shaded at different times.

Adjacent to the cloth houses is a planting of hardy varieties (preferably, garden varieties) which are under scrutiny for adaptability to growing in clumps and to usual home use.

Breeding New Varieties

In the Plant Breeding Department are seedlings of crosses from which new varieties will come. The program here is similar to that of the year-round flowering, in that the plan is to find the specific spot where any variety fits into the flowering program. Once the selections are made, they go from Breeding to Development for further work.

Every plant is carefully checked to

Left. Bench area being expanded 40-50 per cent for 1947 crop. Right. Year-round flowering program section and its supervisor.

make certain it is free of verticillium wilt, and this cultured stock becomes the nucleus stock for disease-free plants. Small wonder that our cuttings are strong and healthy when you learn that all stock is sprayed with insecticide once a week.

Under a pathology set-up in the Culturing Room, where sterile conditions are maintained, samples of all varieties are checked for the nature, cause, progress and result of disease. A section of the stem of all varieties is taken and put in sterile media. If the organism appears, the plant is infected. All new varieties are checked for susceptibility by taking a single plant and innoculating it with the verticillium organism. Whether it is very susceptible or not is immediately apparent.

Production Steps

In the Production Plant, the first step is preparation of the soil. The old plants are first removed. Then the soil—which is sand, with body, but no organic matter — is manured, Rototilled and steam sterilized.

Every week during the shipping season (which has usually been January 1 to July 31), cuttings are taken from stock plants and planted in squares,

4" x 4", in the propagation benches. There they remain for about three weeks before being lifted out into baskets, then packed and shipped. Before any cuttings are placed in benches, however, the entire area is cultivated and steam sterilized. In this process, the bench is shrouded in canvas-like blankets with iron uprights to keep the blankets from bogging down and creating pockets. Every 100 feet along the steam pipe there are three steam outlets.

The shipping box is a standard size. Each holds 500 cuttings, packed 25 in a cell, with wet sphagnum moss lining the bottom to keep the cuttings moist and fresh.

A Packing List copy is sent to the customer 3 to 5 days before shipment to let him know exactly what he is getting and when. By getting as much as possible done in advance, once our growers decide to ship, a minimum of time is lost between taking the cuttings out of the benches and getting the correct labels, nursery certificate of inspection and waybills on the shipping boxes.

Orders are filed according to the requested shipping date and are given preference according to the date received. It, therefore, is advisable to order early. This helps the growers to

plan their plantings and also assures the customer of having his order filled before the supply of the desired varieties gives out.

There are three ways of securing stock and one of these should apply

to every grower:

1. have all rooted cuttings at time of planting.

2. have all unrooted cuttings three weeks before planting and root them in open soil or propagating benches.

3. buy cuttings and use them for stock.

Rooted cuttings, of course, save the grower the time and trouble of the 3-week propagation period. For growers who know propagation, however unrooted cuttings work well. If properly handled, they can produce better results than the average rooted cutting—and there is a saving. The shipping weight is reduced per thousand cuttings, and for the large operator and mum specialist this is a factor.

Sterilization Vital

Where a grower wants to discard his own stock, he can place an early order for cuttings (rooted or unrooted) and

can propagate his own. Provided he cleans out his house before planting, he can thus eliminate the problems of midge and other diseases. Extreme sanitation is of utmost importance, for though our cuttings will produce disease-free flowers the first year, hardy stock thereafter is up to the grower and his methods of sterilization and general cleanliness.

Increasing use of Air Freight in making shipments (where geographically possible) assures the grower of receiving his order within 24 hours after it leaves the greenhouses. Railway Express has not proved too satisfactory, since travel time in excess of 48 hours is liable to produce deterioration. With Air Freight shipping it is possible for growers to plant cuttings the day after they are taken from the sand.

The trade everywhere has learned it can depend on our growers for the finest cuttings, rooted or unrooted; for cultured stock that is completely dependable; for new varieties each year developed by the most exacting and persistent research program; for 24-hour delivery where Air Freight shipping is possible, and for major developments, such as the year-round availability of chrysanthemum cuttings.

Left. Cuttings being lifted out into baskets. Right. Packing cuttings in boxes, to be shipped immediately via Air Freight.

NEW VARIETIES

Omega (YODER BROS.)

A deep lemon yellow pompon maturing December 10, just nicely following Sunnyside. Omega combines an exceptionally strong, vigourous habit and beautiful dark, glossy foliage with a rigid, wiry spray. The formal flower possesses unusual substance and keeping quality. No blindness has ever been

apparent and tests indicate a very high degree of resistance to Verticillium. Omega in its natural season compliments Sunnyside by extending the season of top quality pompons. It is equally valuable on raised benches or ground beds. On the latter with late planting and lights it is easily had for Christmas. It has been successfully lighted into February flowering.

Unhesitatingly we recommend Omega as the best pompon to follow Sunnyside.

Red Rust
(DEPETRIS)

An exquisitely colored, well rounded, large pompon blooming November 5. The color is a beautiful blend of orange, red and chrome bronze similar to Natoma. The habit of growth is clean, uniform, and vigorous with excellent foliage and well branched sprays. The scintillating color is an epoch in chrysanthemum breeding but it is sensitive to intense light and is, therefore, best adapted to later greenhouse shadings and natural flowering. It possesses greater vigor and is easier to grow than Natoma. The production excels that of Navaho. In its natural season Red Rust should become a very important variety in creating greater consumer appeal and stimulating interest in intrinsically vivid and useful colors.

FOR 1947 PLANTING

Lakme (DEPETRIS)

A glistening small white pompon that matures normally November 12. It possesses a hard, durable, formal flower that easily satisfies the most critical demands for keeping and shipping quality. Its trim, smart appearance is enhanced by a chartreuse eye. The habit of growth is free, wiry, and the dark, rigid stems de-

velop a very productive compound spray. In growth habit and cultural requirements, it very closely resembles the variety Cassandra. Its black cloth response is rapid and just nicely follows Pinocchio in the shading program. It lends itself well to out-of-season flowering and has been outstanding in the Cornell trials. High, uniform production and the height of quality in its floral make-up assure Lakme a position of eminence in any list of early profitable white pompons.

A small, decorative, lavender pink pompon that flowers naturally October 20. Caroline Yosick gives a sharp and uniform response to black cloth shade and its major value is for August and September flowering. It compliments and completes an important trio for early shading—Caroline Yosick, Pinocchio, and Gold Coast. It has a very dependable growth habit, does not crown like Jewell, and has a much more rigid stem than Jessie and Pink Dot. The small, decorative flower of Caroline Yosick possesses excellent colorholding quality, and is very satisfactory under even the earliest shadings. Its color is not outstanding in natural daylight but brightens or softens remarkably under artificial lights.

Caroline Yosick (SHELBY FLORAL)

VARIETIES NEW

Brocade

(YODER BROS.)

A lively cameo pink daisy that blooms naturally with Masterpiece, November 15. The variety is of extremely easy culture. Its free, vigorous growth makes for top production. It is medium to tall in height, and the strong stems develop big, well branched sprays. The response of Broacde to shading is similar to that of Masterpeice and should be grouped with that variety in the shading program. Brocade is the pink daisy to compliment

Masterpiece in later shadings and natural flowering. For a mid-season pink single to flll the gap between the early pink singles, October Pink and W. H.

Buckingham, and the later variety, Valencia, we suggest Brocade.

Debonair (YODER BROS.)

A rich crimson red decorative pompon that blooms normally December 5. The beauty and symmetry of its form combined with the velvety gloss of its rich and intense color has never failed to create enthusiastic comment. Shaded to flower for the 1945 National Chrysanthemum Show in Cleveland it took top honors in seedling competition. Moderate temperatures, optimum light intensity and other environmental conditions which promote a firm wood and gradual elongation of stem and spray best suit this variety. Debonair can be lighted for the Christmas Season. The growth is vigorous, and healthy and because of the strong consumer demand for this color, it commands premium prices.

FOR 1947 PLANTING

Gold Coast

(BAUR-STEINKAMP)

A small deep lemon-yellow pompon blooming normally October 25. It lends itself ideally to early shadings. Its clean, vigorous free growth habit is outstanding. In growth habit and production, it is very similar to Pinocchio. It compliments and completes an important trio for early shading. . . Gold Coast, Pinocchio and Caroline Yosick. The flower is small and firm; the color is intense. Easily grown and consistently dependable—a top-notch cloth house variety. We recommend Gold Coast as the best yellow pompon for early shading.

Sunkist

(YODER BROS.)

An intense golden yellow single that flowers normally with Vibrant December 20, for the Christmas season.

The variety lends itself to wide variations in culture and dependably produces a profitable crop. Like Vibrant, Yukon, and Rosalind it is well suited to late planting and ground bed culture. In preliminary trials it has responded very saitsfactorily when lighted for delayed flowering. Easily grown and readily sold, Sunkist fills a real demand for golden Christmas daisies.

DARK PINK Orchid Queen

(DELWORTH)

An intense mauve pink sport from Orchid Queen with the added attributes of increased vigor in both plant and flower. The importance of its value over its parent for early shading has been proven by extensive tests. The color is much deeper. The flower is larger and more fully rounded. The foliage, stem and height of the plant are larger and stronger than the original. Dark Pink Orchid Queen should rapidly take a prominent position in the list of good standards.

NOTE

The price of Unrooted Cuttings will be \$27.50 per Thousand on all standard price (\$40.00) varieties and \$12.50 less than the Rooted price on all varieties over \$40.00.

Terms of Sale =

- 1. Minimum total order accepted is 500 rooted cuttings.
- 2. Fifty rooted cuttings of a variety is the minimum that can be supplied. More than 50 of a variety must be in multiples of 50.
- 3. 250 unrooted cuttings of a variety is the minimum that can be supplied.
- 4. Quantity discounts are discontinued.
- 5. Two per cent discount permitted on payment within 10 days from invoice date. Sixty days net.
- 6. Shipments are forwarded by best carrier in our judgment unless otherwise specified by customer.
- 7. First-class stock is carefully packed and we hold good order receipt from transportation company. Our responsibility ceases thereafter. If the stock reaches you in bad condition, notify agent and bring claim against the delivery company for damages by their negligence. No allowance for this cause can or will be made by us.
- 8. All items in this list are offered subject to crop deliveries or failures, and being unsold on receipt of order, and other conditions beyond our control, and the prices are subject to change without notice.
- 9. While we exercise the greatest care to have all seeds pure and reliable, and all bulbs, plants and cuttings true to name, we do not give any warranty, express or implied, and will not be in any way responsible for the crop. If purchaser does not accept goods on these terms, they must be returned at once and money will be refunded. Our liability is limited to purchase price of product.
